

## Regulator 600 Nitrogen 0-200 Bar

**Item No.: 211213212**

**Product information**

A single stage regulator for nitrogen can reduce the inlet pressure from 200bar to any pressure between 0 and 200 bar. The application for pressure accumulators (pressure dampers) is one of the main applications used on board. Gas regulators should be replaced with maximum 5 years intervals as a rule, because internal seals and membranes will deteriorate with time. Faulty, old or corrodes regulators should be replaced and repairs should never be attempted on them.

**Specification**

<b>General:</b>	<b>Invent Hazard Material (IMO/EU) classification</b>	<b>NA</b>
-----------------	---	-----------

<b>Performance Data:</b>	<b>Working Pressure</b>	<b>0-200 BAR</b>
--------------------------	-------------------------	------------------

<b>Dimensions/Weight:</b>	<b>Connection (size/type)</b>	<b>W24.32 mm x 1/14"</b>	<b>Technical Data:</b>	<b>Outlet connection (inch)</b>	<b>1/4" (6.3mm) high pressure copper tube</b>
